UNIVERSITY
OF ABERDEEN

HGCA

Outline

The James
Hutton
Institute

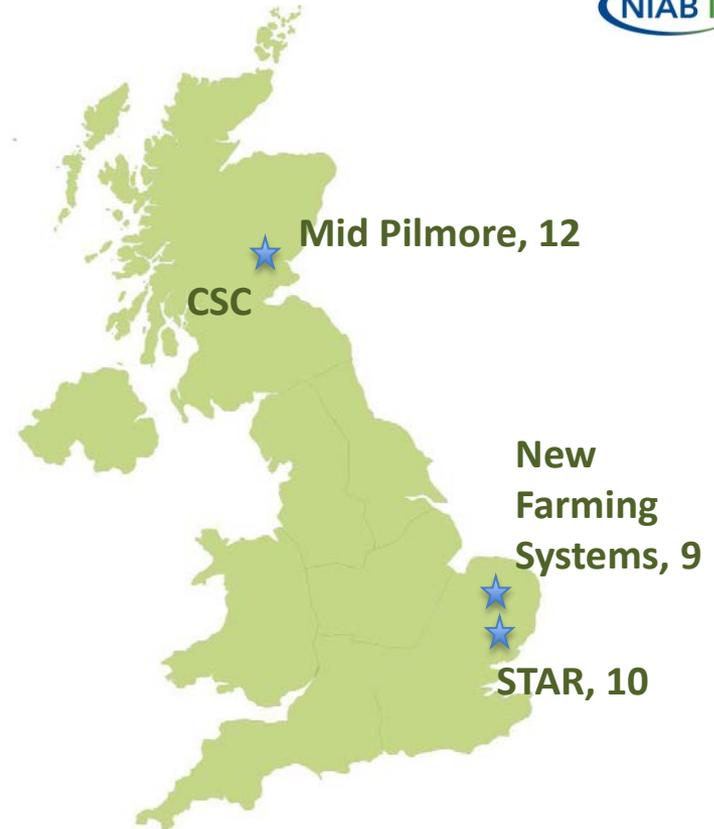

- Introduction to the Platform Project (s)
- Crop response to cultivation
- Standardize approaches to soil quality
- Margins
- The future

What does this project offer that is unique and useful?

- Large shifts in soil management take years to establish a new equilibrium
- Conventional and non-inversion cultivation at all sites
- Combined with experiments on rotational design and nutrients to determine best soil management practices
- Not all studied every year

The James
Hutton
Institute

What does this project offer that is unique and useful?

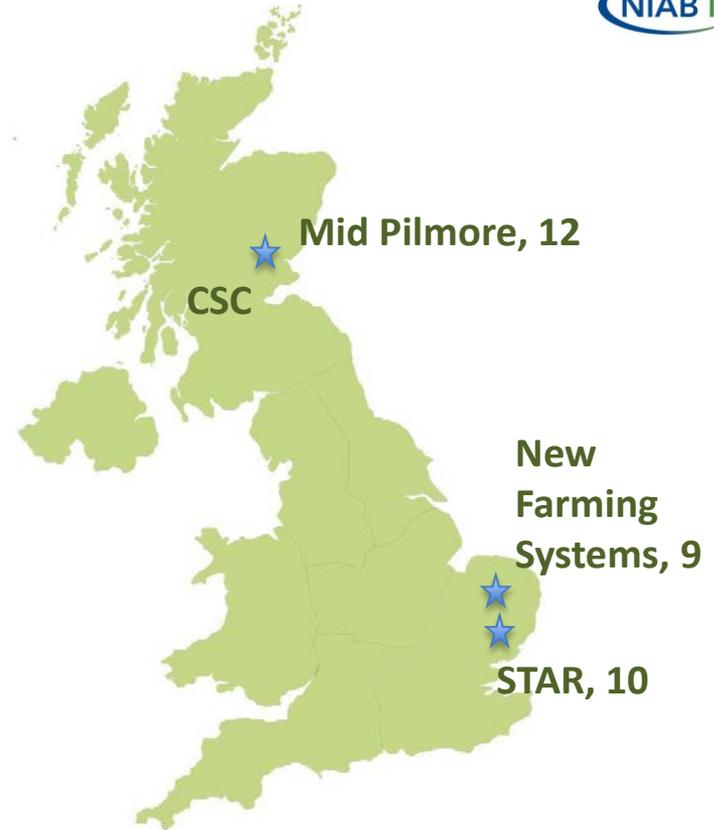

The James
Hutton
Institute

Fewer varieties
↓
Closer to real farm practice

- Mid-Pilmore: lots of varieties but at plot scale x cultivations
- CSC Balruddery: 2 systems and 5 varieties
- Sustainability Trial for Arable Rotations: 4 rotations x 4 cultivations
- New Farming Systems: cover crops, amendments x cultivations

Who is involved?

- At Hutton
 - Blair McKenzie, Tim George, Tracy Valentine, Adrian Newton
 - Jen Brown, Anna Taylor, Dave Guy, Kirsty Binnie, Lawrie Brown
- At NIAB
 - Ron Stobart, Nathan Morris
- Uni Aberdeen
 - Paul Hallett

Who is involved?

The James
Hutton
Institute

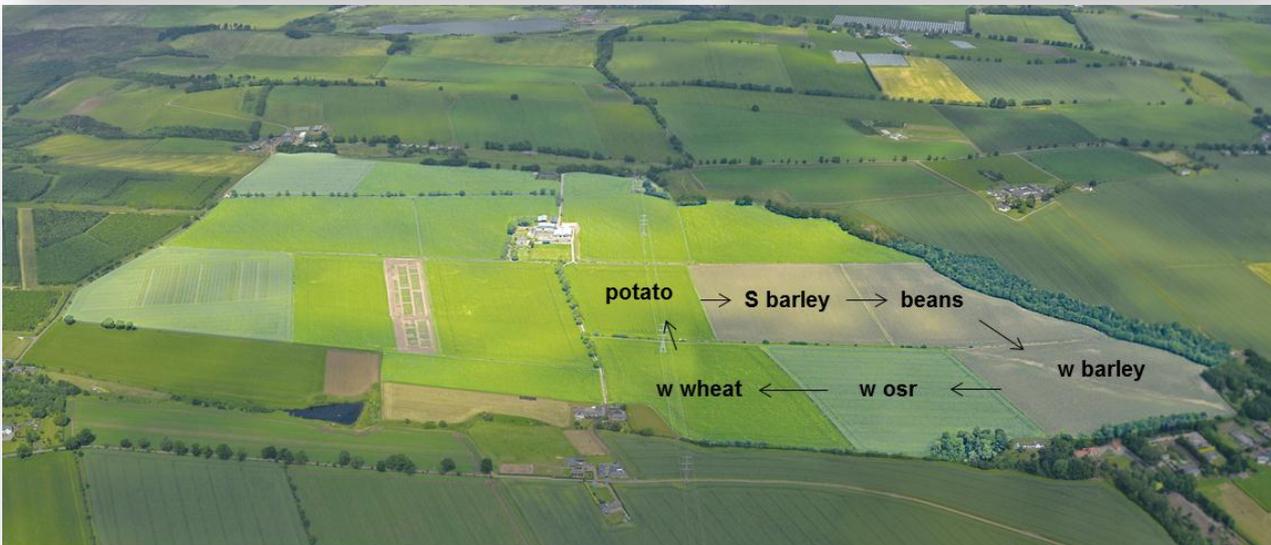

Mid Pilmore, Hutton

STAR, NIAB-TAG

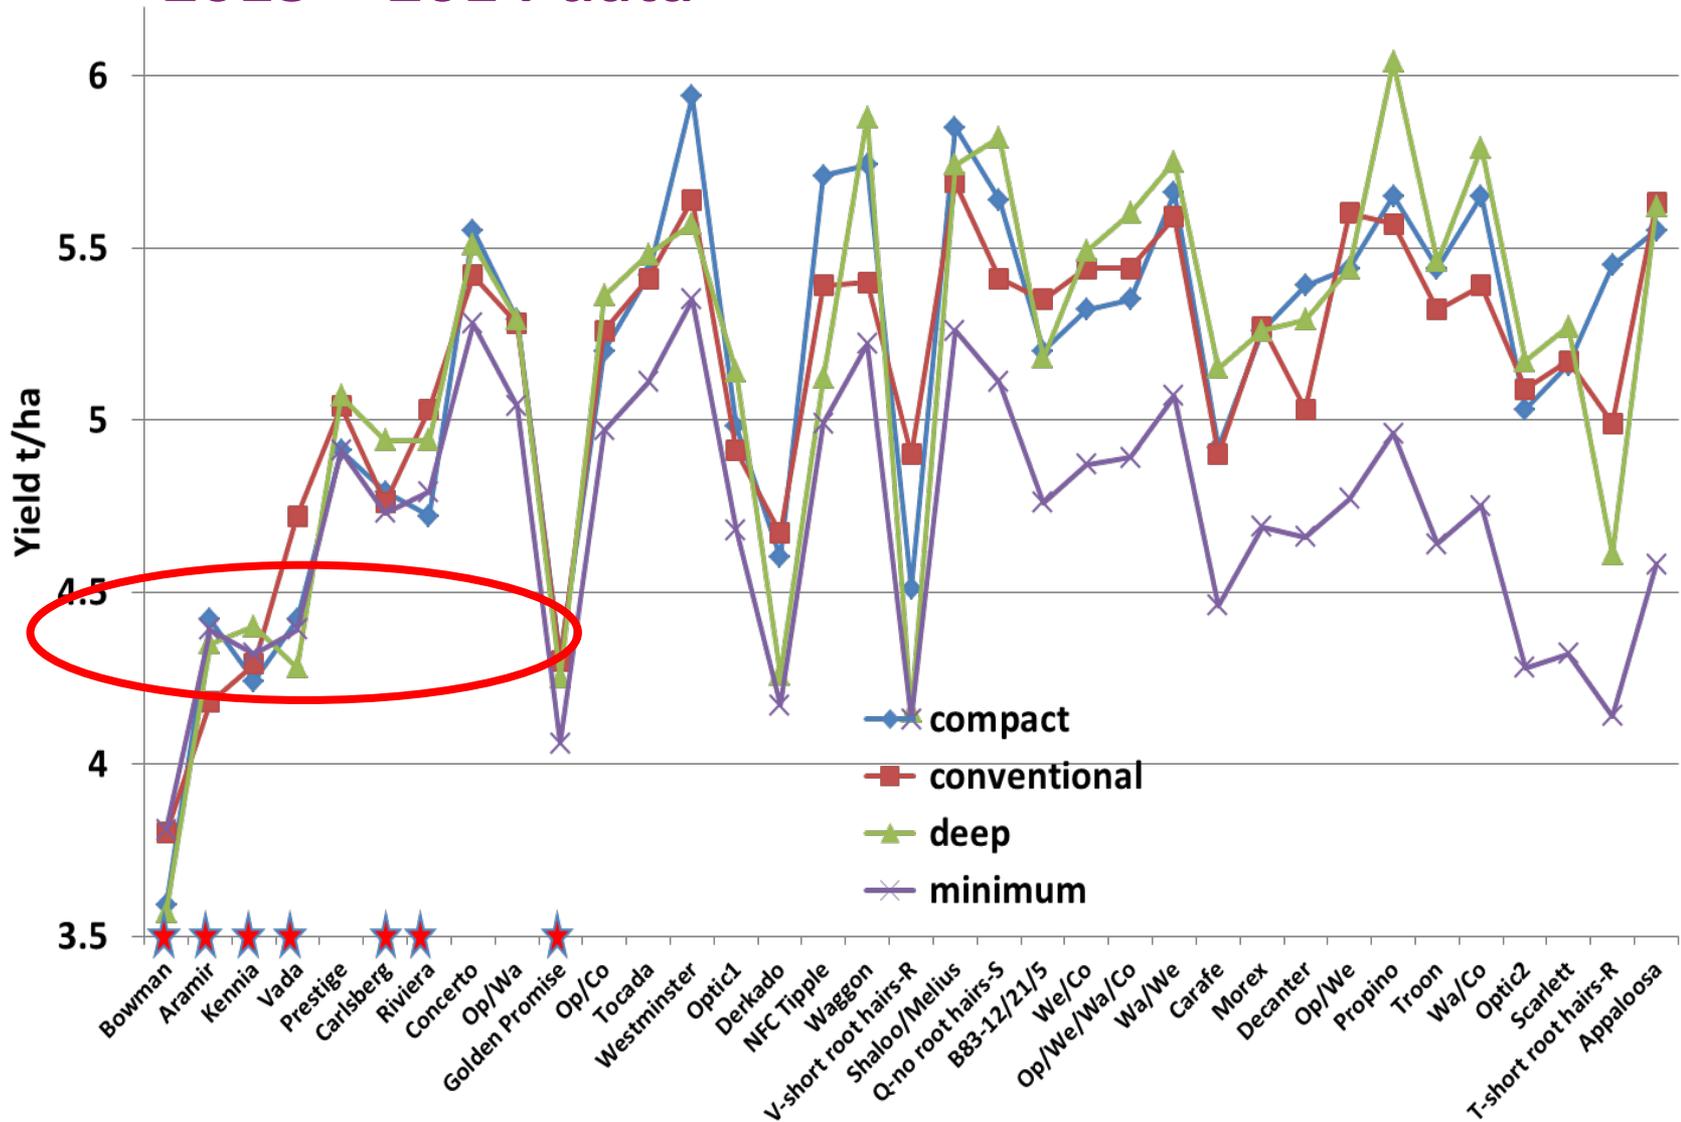

NFS, NIAB-TAG

**Centre for Sustainable
Cropping, Hutton**

Yield in minimum cf. disturbed
2013 + 2014 data

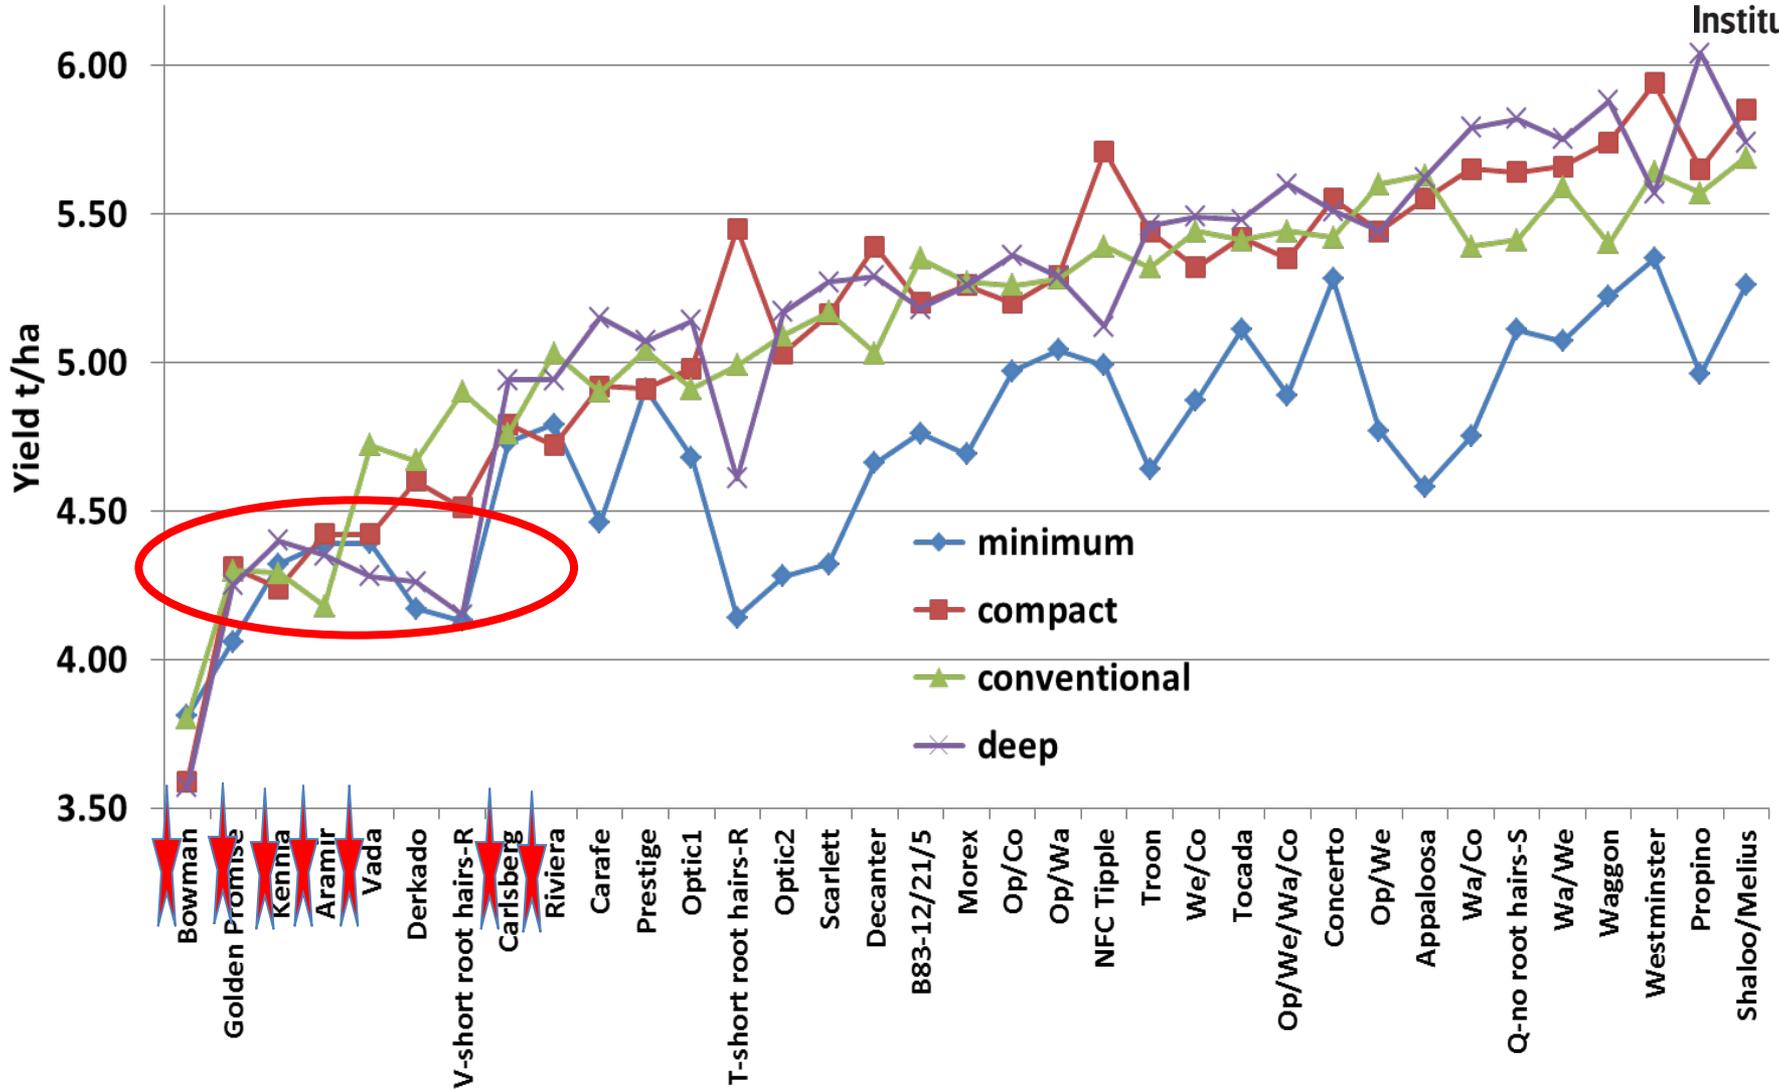

Ordered by difference between minimum & disturbed av.

The James
Hutton
Institute

Yield in minimum cf. disturbed
2013 + 2014 data

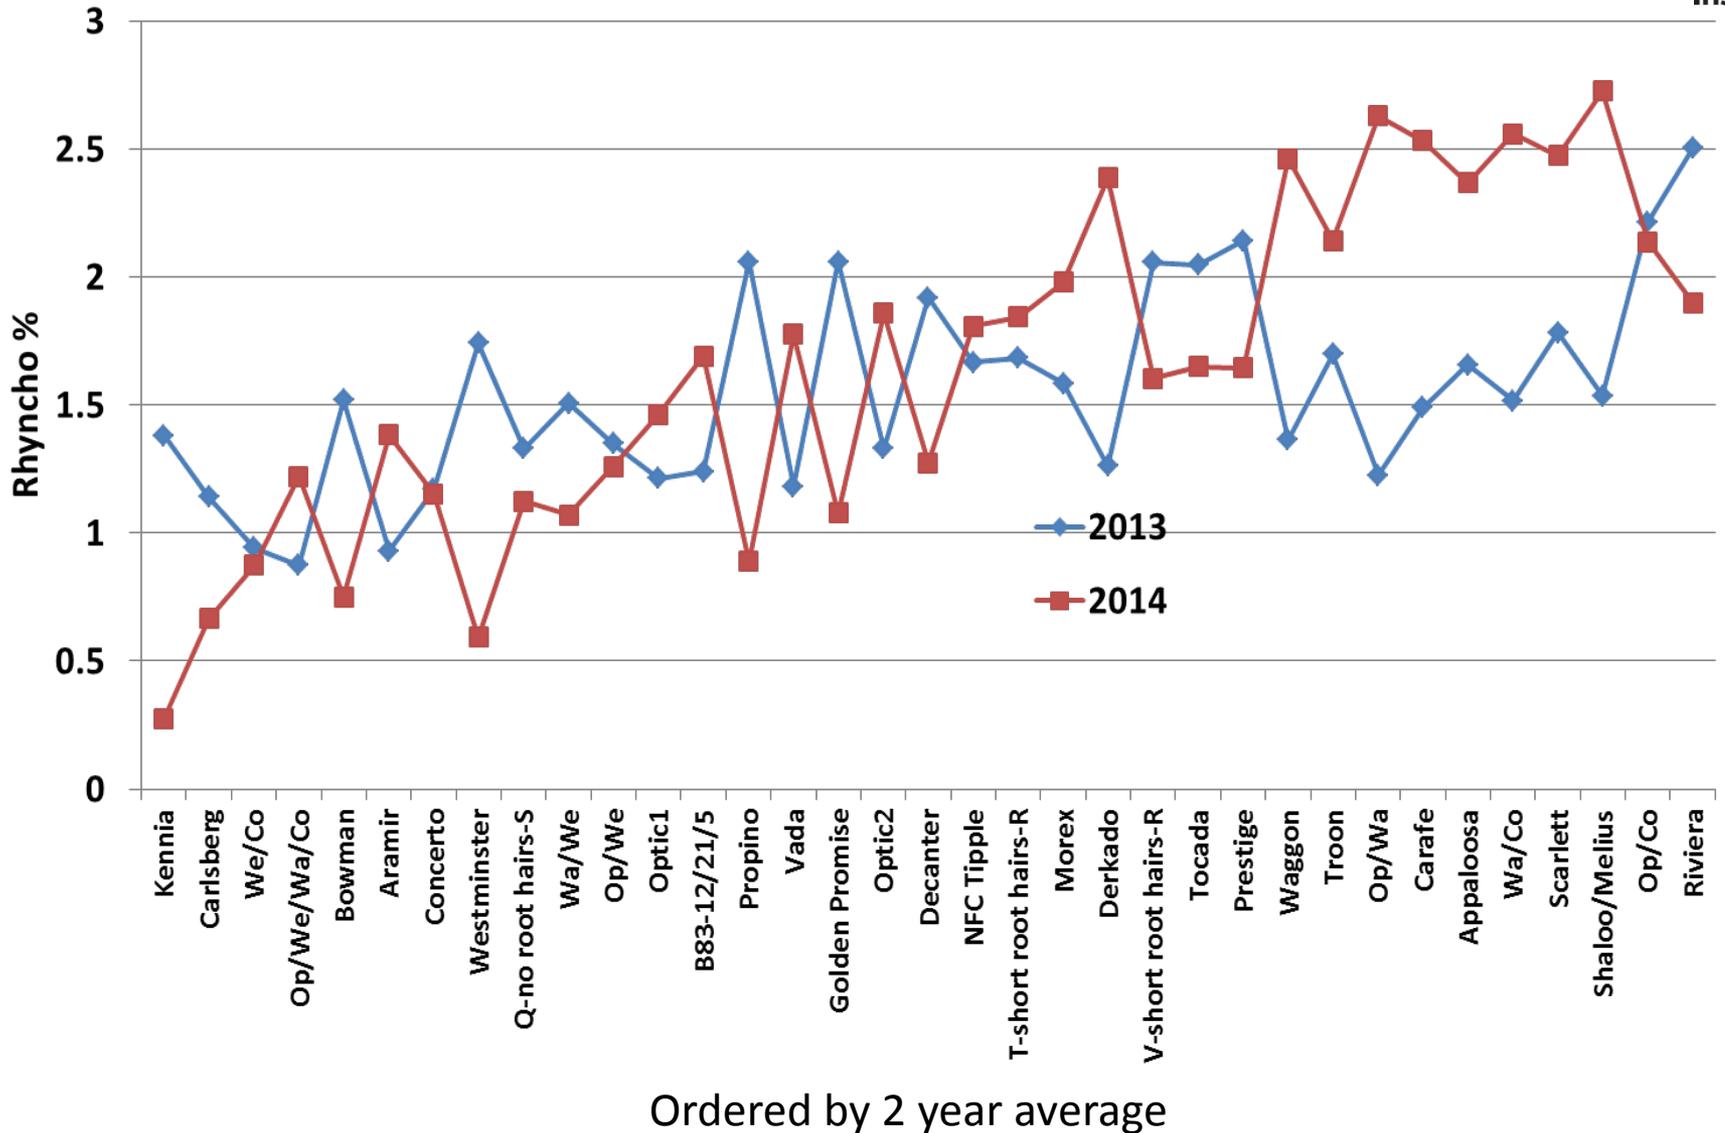

Ordered by disturbed yield average

Rhynchosporium infection

2013 + 2014 data

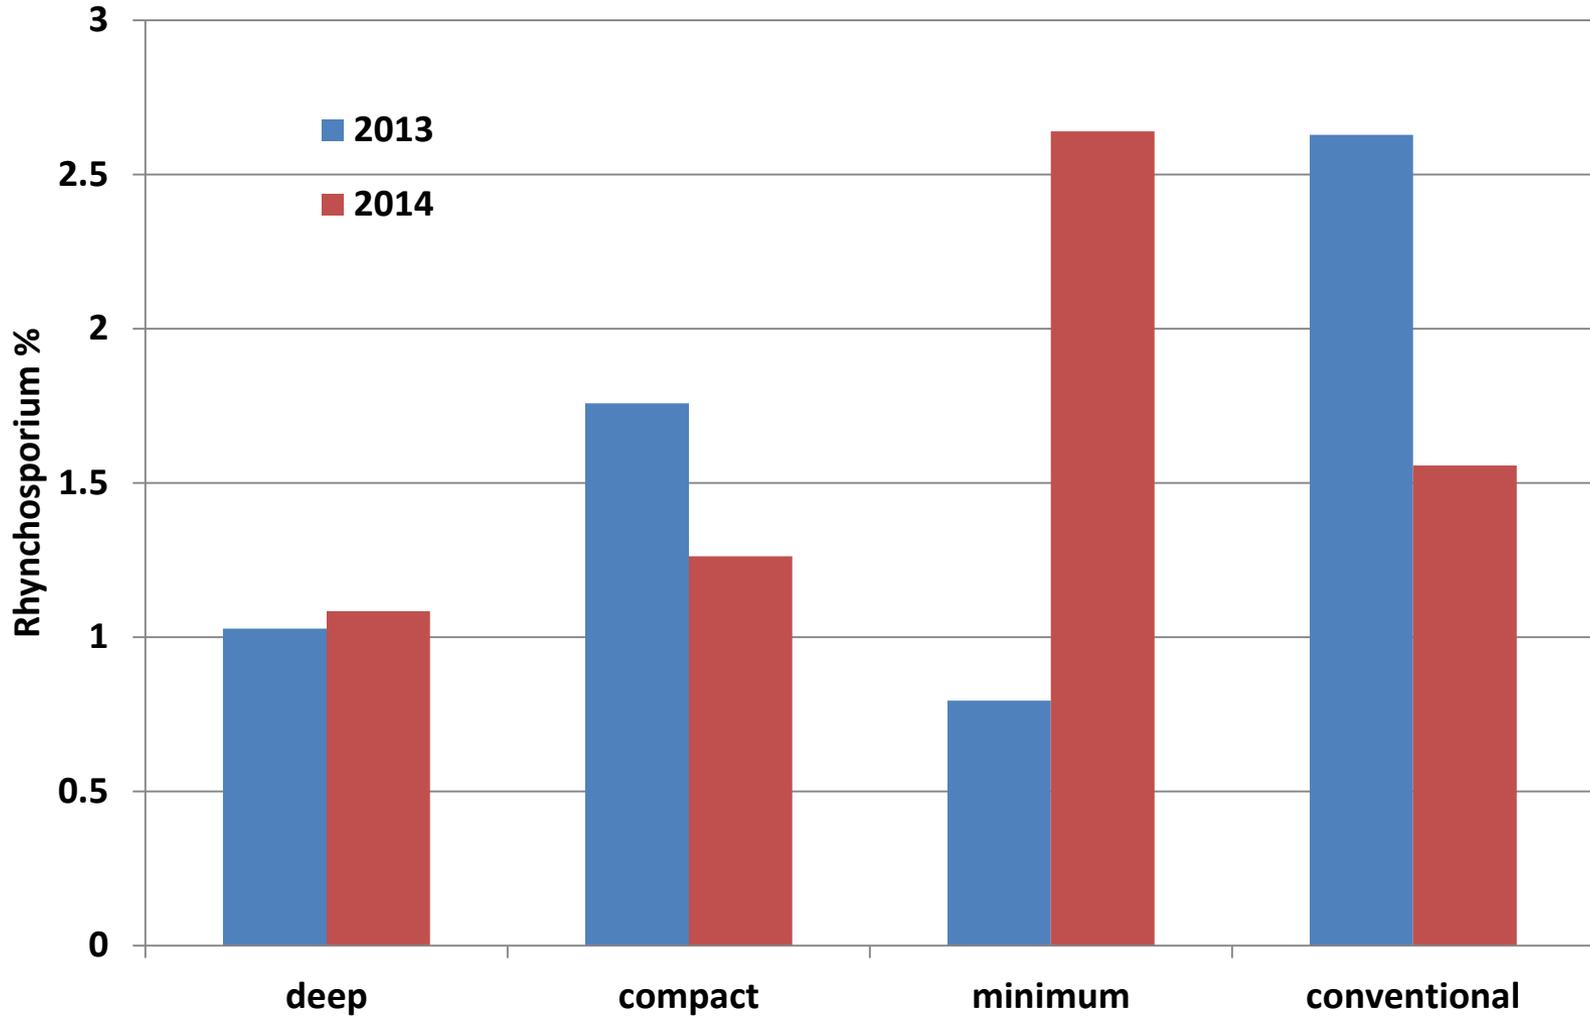

Rhynchosporium infection

2013 + 2014 data

The James
Hutton
Institute

Comments

The James
Hutton
Institute

- **Spring** cultivars show differential response to soil cultivation (as for winter cultivars)
- Higher-yielding cultivars respond to soil disturbance better
- Older and lower-yielding cultivars tend not to respond differentially to soil disturbance
- Effect of disturbance on *Rhynchosporium* varies with season

But what about the soil?

Soil stability

- Water stable aggregation -
 - >0.25mm associated with plant and microbial exudates
 - >2mm associated with roots and hyphae

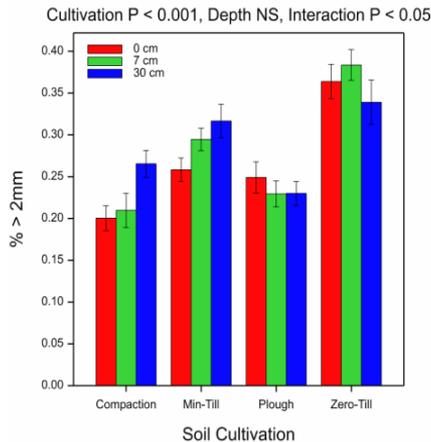

Mid-Pilmore 2013 WSA

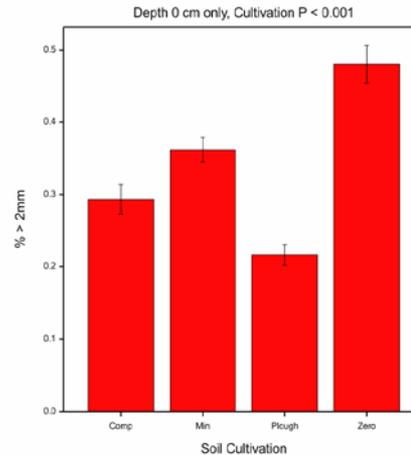

The James
Hutton
Institute

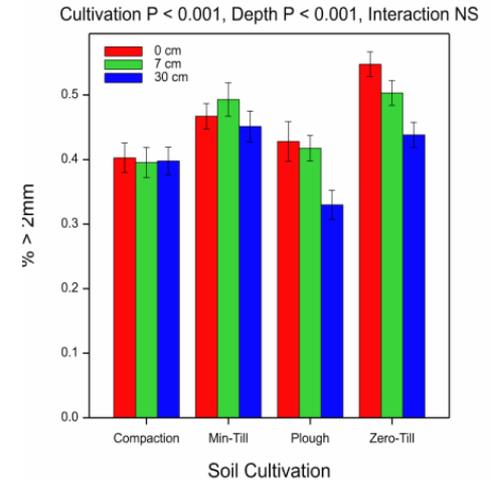

Mid-Pilmore April 2013 WSA > 2mm

Mid-Pilmore May 2013 WSA > 2mm

Mid-Pilmore August 2013 WSA > 2mm

- Spring barley
- At planting (April), after crop establishment (May), preharvest (August)
- Generally More disturbance = less stable
- Different rates of recovery of stability

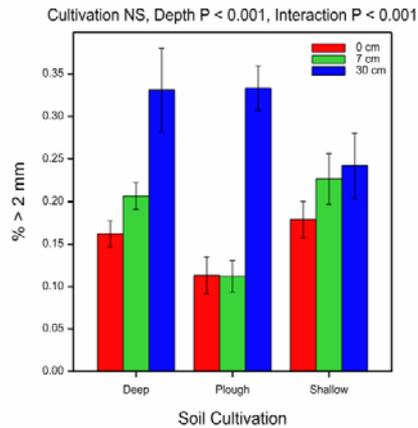

STAR 2013 – 2012 WSA

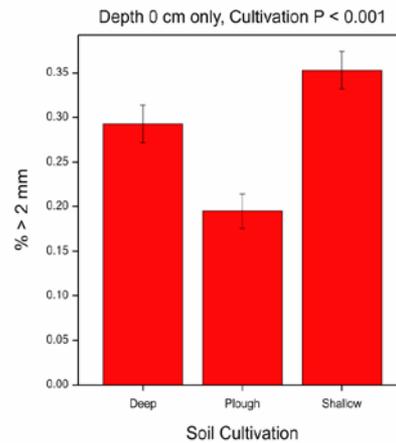

The James
Hutton
Institute

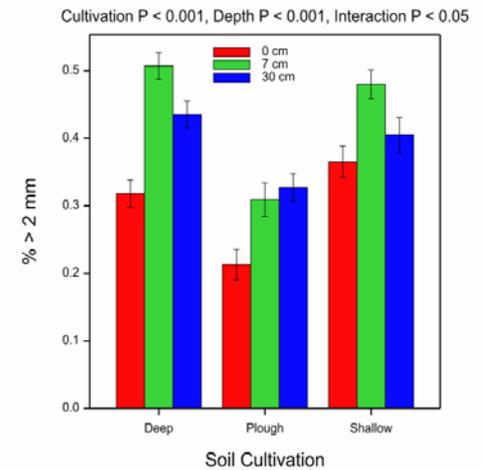

STAR October 2012 WSA > 2 mm

STAR May 2013 WSA > 2 mm

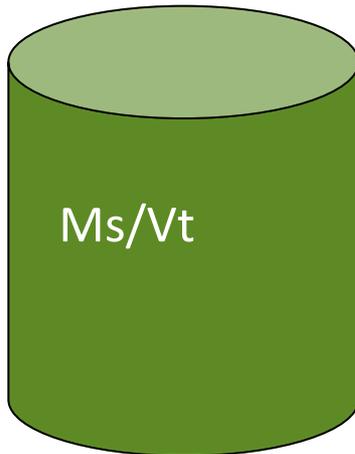

STAR August 2013 WSA > 2 mm

- Winter cereal
- October 2012 after cultivation and drilling
- May 2013 crop established
- August 2013 before harvest
- Generally more disturbance = less stable
- Different rates of recovery of stability

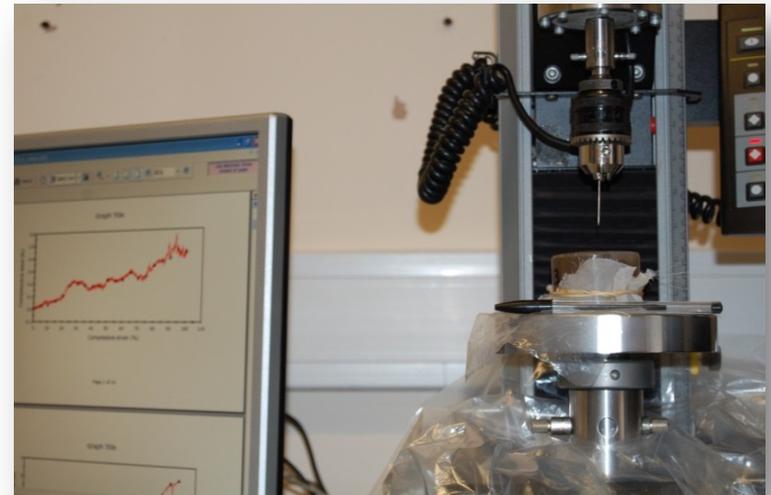

Traditional measure of structure: bulk density

- Mass of solid material per unit volume
- Need to relate to root growth
- Variability!

Measures to assess soil physical status

- What are the conditions for crop growth as affected by soil management?
- Plant available water –
 - θ field capacity – θ wilting point
 - Pore size distribution
 - Macroporosity
- Least Limiting Water Range –
 - links aeration, hardness and water
 - uses micropenetrometer
 - measured on soil core samples

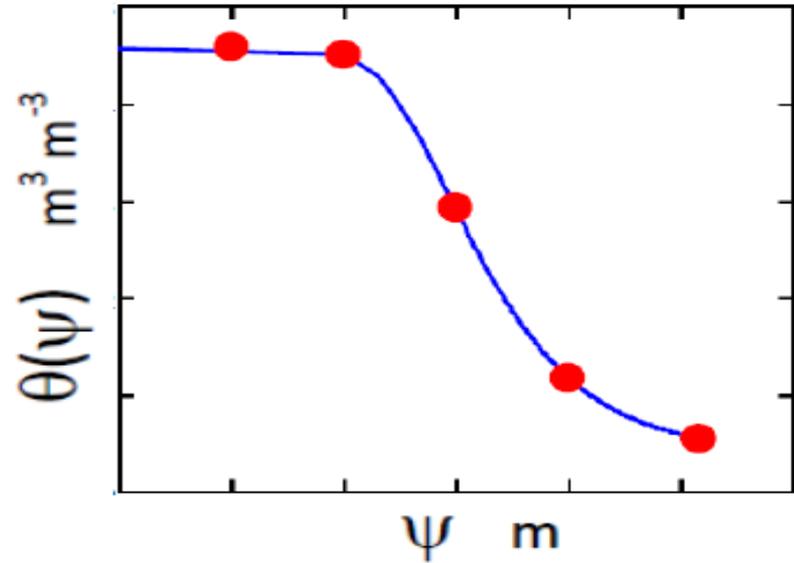

Familiar concept: Plant Available Water

The James
Hutton
Institute

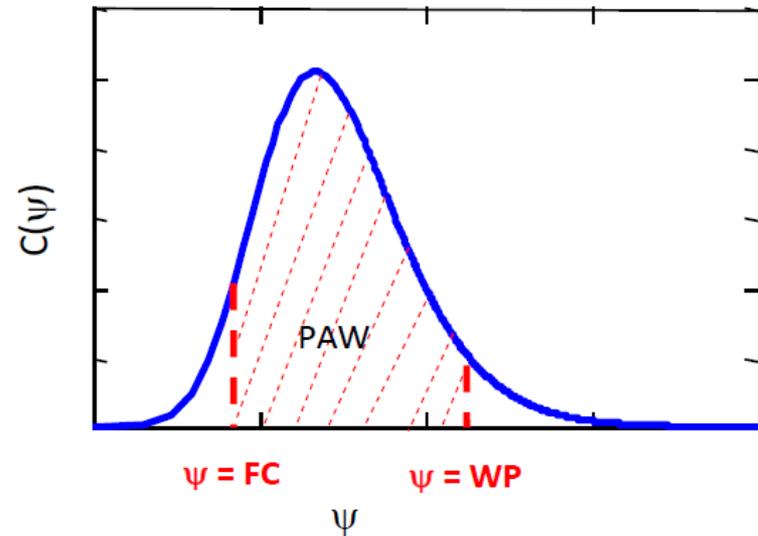

Water retention curve

$$\theta = f(\psi)$$

$\frac{d\theta}{d\psi} = \text{differential water capacity, } C(\psi)$

$$PAW = \int_{\psi=FC}^{WP} \frac{d\theta}{d\psi} d\psi$$

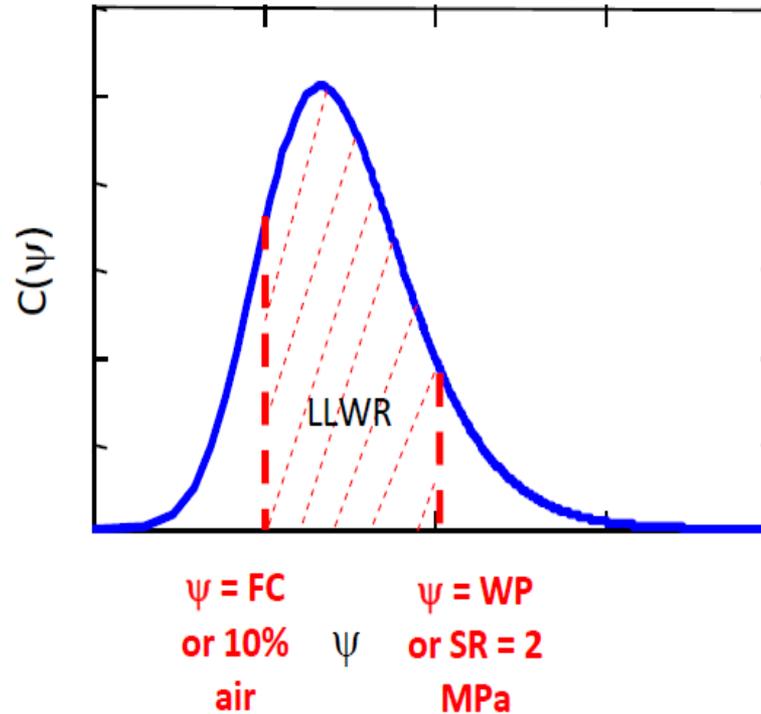

Concept: Least Limiting Water Range

Can also determine volume of macropores and their size distribution.

How do we know the relationship between water content θ when Soil Resistance = 2MPa?

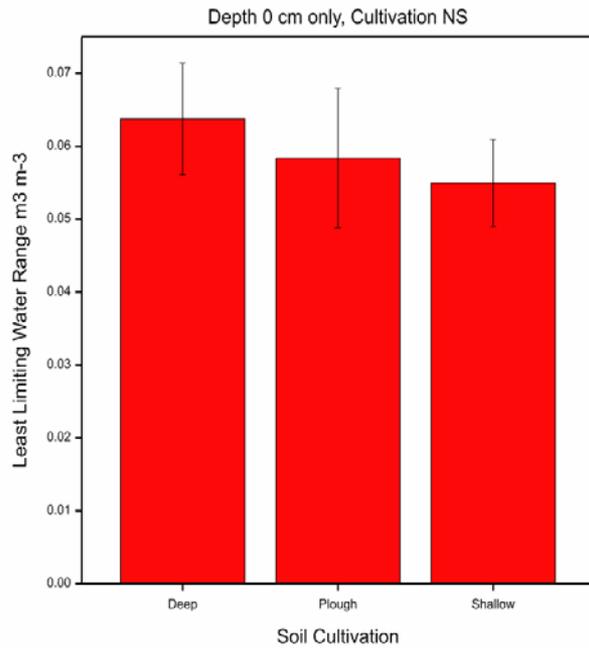

$$LLWR = \int_{\substack{WP \\ \text{or} \\ \psi@SR=2MPa}}^{\substack{\psi=FC \\ \text{or} \\ \psi@10\%\theta_{air}}} \frac{d\theta}{d\psi} d\psi$$

da Silva and Kay
1994

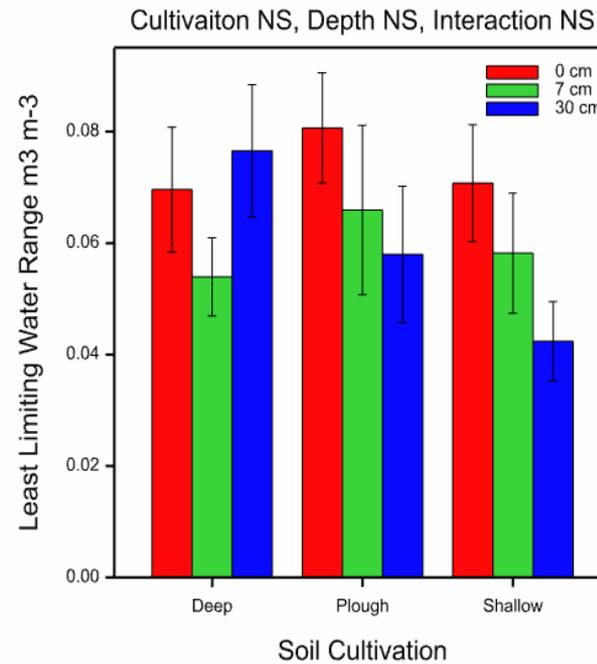

STAR 2012 – 2013 LLWR

STAR May 2013 LLWR

STAR August 2013 LLWR

LLWR varies with time and depth

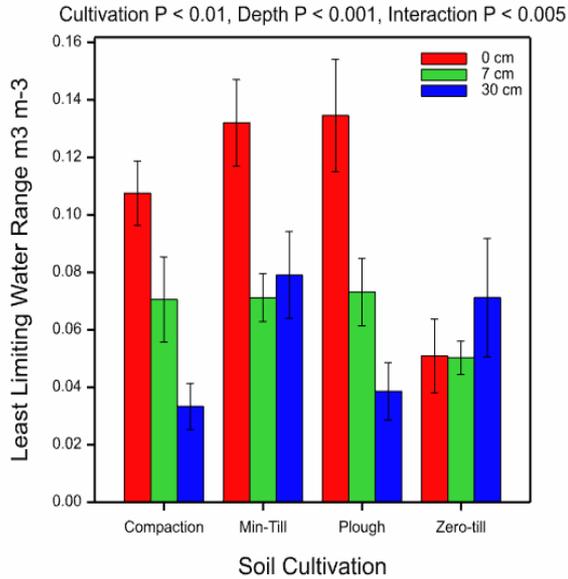

Mid-Pilmore 2013 LLWR

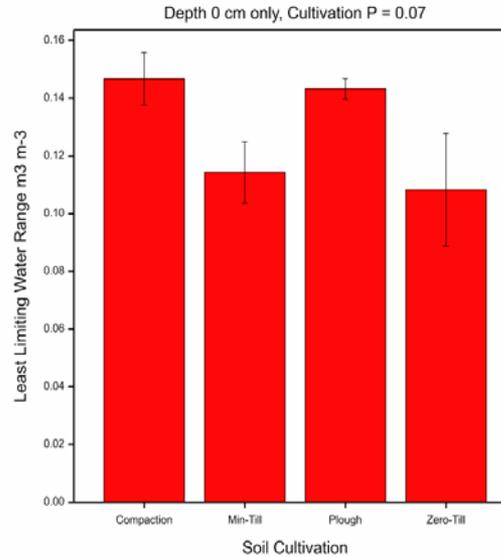

The James
Hutton
Institute

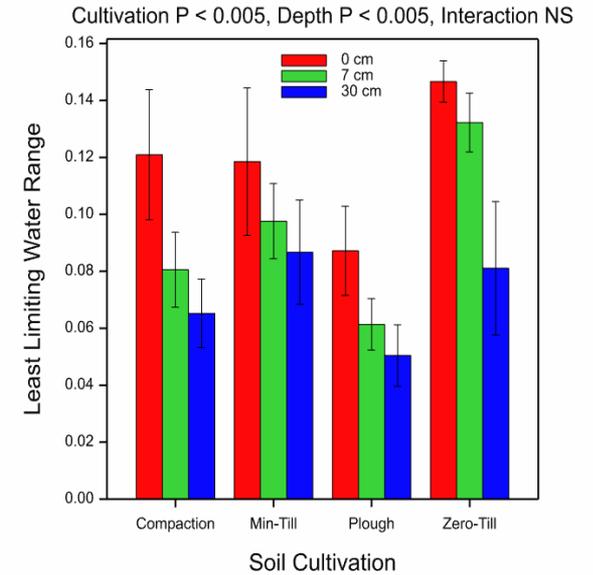

Mid-Pilmore April 2013 LLWR

Mid-Pilmore May 2013 LLWR

Mid-Pilmore 2013 LLWR

Changes over growing season

STAR Project

(Sustainability Trial for Arable Rotations)

Rotations

- Winter Cropping
- Spring Cropping
- Continuous W Wheat
- Alternate Fallow

Establishment

- Annual Plough
- Deep non-inversion
- Shallow non-inversion
- Managed Approach

= 16 treatments

X 3 replicates

Rotation	Cropping									
	2006 (Year 1)	2007 (Year 2)	2008 (Year 3)	2009 (Year 4)	2010 (Year 5)	2011 (Year 6)	2012 (Year 7)	2013 (Year 8)	2014 (Year 9)	2015 (Year 10)
1 Winter cropping	WOSR	Wheat	Winter beans	Wheat	WOSR	Wheat	Winter Beans	Wheat	WOSR	Wheat
2 Spring cropping	Spring Beans	Wheat	Spring Oats	Wheat	Spring Beans	Wheat	Spring Linseed	Wheat	Spring Oats	Wheat
3 Cont wheat	Wheat	Wheat	Wheat	Wheat	Wheat	Wheat	Wheat	Wheat	Wheat	Wheat
4 Alt fallow	Fallow	Wheat								

In the managed approach the cultivation regime is decided annually by the project steering group; this decision is based on soil conditions / assessments, previous cropping, weed burden and local best practice. The techniques used have ranges from single pass approaches through to ploughing.

STAR yields and margins 2012-13 (winter wheat)

(Draft data – margins as gross output minus input costs and direct machinery costs)

The James
Hutton
Institute

	Yield (t/ha)				Gross margin – machinery cost (£/ha)			
	Winter	Spring	Cont	Alt Fallow	Winter	Spring	Cont	Alt Fallow
Plough	9.39	9.04	7.08	8.91	768	716	422	696
Managed	8.92	9.50	7.84	8.23	743	830	581	652
Deep non-inversion	8.66	9.16	6.48	8.91	704	779	377	741

Offspring from Mid-Pilmore

- 14 years of monoculture
- Originally 5 cultivations (Zero has failed to produce yield)
- Min Till (shallow non-inversion) struggling
- Surface pH approaching critical
- Weeds becoming uncontrollable
- Slugs, pigeons and other pests
- The end looms – what next?

Discuss

- What questions need answers?
- I have ideas – but want to hear from others

We know a lot about what conditions roots want

Water Retention (including aeration) & Penetrometer Resistance

Putting the ideas together.
